### **PURPOSE:**

This SOG is intended to provide a frame work for the use recording devices to include but not limited to fire helmet cameras.

### **OBJECTIVE:**

This SOG will discuss the benefits, operation, use, function, maintenance, permission, and consent aspects of the recording devices.

### **SCOPE:**

All Personnel

### **Benefits:**

The obvious benefits of the recording devices are varied and numerous. As a reliable recall device the recording equipment is an incredibly valuable tool of the fire service.

### **PROCEDURE**

- ***Fire Investigations:***

When a firefighter or fire officer is asked by a fire investigator of the scene conditions upon arrival answers may be hindered by the limitation of human memory, the stress of multitasking, or inattentiveness because of other priorities. Those investigators who take the time to review the video from the recording device will see exactly what initial fire companies saw upon arrival.

- ***Other Investigations:***

Should the unimaginable happen, and a firefighter loses his/her life in the line of duty. The video and audio from the recording device maybe used by fire investigators to understand the circumstances surrounding the death.

- ***Critique:***

A million and one things are going on at the same time on a fire scene. It has been said that the first fifteen minutes of a fire reduces the life span of a firefighter by a forty-hour workweek. Fire department scene critiques are the best way to identify all of the aspects of a call and make changes as to the efficiencies of operations and techniques. Critiques can be greatly enhanced by the recording devices. Company officers can go step by step through a call. All members of the company have the opportunity to see items that otherwise they may have not had the opportunity to see while on scene (i.e. illegal wiring, hazardous situations, conditions at other points of view, and other items of interest).

*Daniel R. Spillman*, Fire Chief

- **Quality Assurance/Improvement:**

Using a recording device during a critique offers a quality assurance/improvement aspect similar to the written report of an EMS call. This quality assurance/improvement aspect is designed to better the fire department as a whole. It is not intended to be a disciplinary tool, but a learning tool. When the first dashboard cameras were mounted in police cars there was resistance by police officers and administrators alike. Today there are only two types of officers that do not appreciate the dash camera. First, is the incompetent, and second is the renegade, neither of which have any business in law enforcement. The dash camera has helped thousands of police officers identify threats that may save their life in the future. The recording devices provide that same level of professionalism to the fire service. Identified risks and close calls are to be shared by all members of this department and by the fire service as a whole.

- **Training:**

Fire department training officers may use the recording device on a recruit going through training mazes while vision is obscured. After the exercise the student can see items missed during primary and secondary search. Training videos can be created from the videos obtained by the recording equipment and used over and over to train others. The recording devices may be used on all training events.

- **Recruitment:**

The recording device will allow potential recruits to see what a real fire looks like. There is no Hollywood special effect or props.

- **Hazmat:**

The recording device may be used during hazardous materials incidents on recon missions. The recon team will relay all information to the research personnel by normal means. The recording device may be used to confirm findings to the research personnel and provide an exact description of the scene to the incident command.

- **Personal Protective Equipment Compliance:**

Using a recording device on emergency incidents will assist the company officer identify unsafe actions or lack of PPE compliance. PPE compliance will ultimately prevent injuries or even death.

- **Tactics and Strategy:**

Using the recording device to review fire ground tactics and strategy can improve overall operations.

*Daniel R. Spillman*, *Fire Chief*

- **Use:**

Use of the recording device shall not delay any fire suppression or rescue activities. The recording device may be used time permitting on responses except for EMS only calls and direct patient care.

- **Function:**

The function of the recording device is to provide video and audio documentation of fire scenes. These recordings will serve as reliable recall of the events of an emergency incident.

- **Permission:**

The following are the permitted items concerning the use of recording devices.

- ***Required/Allowed or Permitted:***

Recording devices are permitted by members of this department for all incidents except for direct patient care.

- ***Posting, Uploading, or Emailing Video on the Internet:***

All video content will be reviewed by the fire chief or his/her designee before being posted, uploaded, or emailed.

- ***HIPPA/Privacy Requirements:***

The recording devices may not be used to video or record private medical information or records. Patient care or other private and/or personal information shall not be disseminated with the aid of the recording equipment.

- ***Rescue Calls:***

The recording devices may be used on rescue scenes. If the recording device inadvertently records a patient care event such as a rescue, the fire chief will have the last say in the use or purpose of the video.

- ***Eavesdropping/Illegal Activities:***

The recording device shall not be used for any illegal activities such as eavesdropping, listening to, or recording private conversations.
